

# Image-Vet® *SuperVista*

## USB Intraoral Camera System

- Superior image quality
- Take dental diagnostics to the next level with this easy-to-use imaging tool
- The convenience of an intraoral camera that integrates with a digital dental radiography system
- Seamlessly compatible with the EVA Vet® Digital Dental Imaging System and ViewAll® imaging software
- USB 2.0 connectivity - No external power supplies or proprietary capture cards

*The perfect companion for the  
EVA Vet Digital Dental Sensor!*

# ImageWorks Veterinary Dental Imaging Solutions For Every Practice

The ImageWorks Veterinary SuperVista intraoral camera is an easy-to-use handheld USB camera. This wand-style camera uses digital photography for diagnostic evaluation and client presentation. Simply position the camera close to a region of interest and use the single-click shutter button to capture as many images as you would like. After a picture is captured, it saves in the software as the camera returns to video mode, ready for the next picture.

Using ViewAll with the SuperVista means that you can save dental photographs alongside dental radiographs in a patient's file. This expansion of ViewAll usage provides more information to referring doctors and clients, thus allowing an office quick explanations through visual records.

The SuperVista is widely regarded as a critical aid in documentation and explanation.
